

Firstly, thank you Sir/Madam for giving me chance to introduce myself,

My name is Achyutha Reddy. I come from a family of 4 members in which my father works as a farmer and my mother works as a farmer and she manages the house. Me and my sister live together in the same hometown Hyderabad.

I finished my schooling from Revathi high school in the year of 2019 and my intermediate from sri Chaitanya junior college in the year of 2021, after which I finished my graduation in the field of computer science as a bachelor of technology from vidya Jyothi institute of technology.

Technically speaking I am trained as a software developer with python as my core coding language for the last six months at an institute known as Kapil it skill hub in Ameerpet. Additionally, I have received professional training in some soft and support skills as well because of which I am confident in my capacities such as multi-tasking, time management and communicating with the clients through texts, calls or mails.

In the next two years, my goal is to be a team lead and to manage my own within few next five years.

During my free time I like to do meditation.

My best quality is staying calm and I think it will help me during my job by managing the projects in an easy way.

That concludes my self-introduction. Thank you for listening me. In case you have any questions, I am open to answer them.
